How does MEDIHONEY® / Active Leptospermum Honey help to support the healing of routine and challenging wounds?

**Gel vs Paste Dressings**

- Helps to maintain a moist environment for optimal healing.
- High osmotic potential pulls fluid from deeper tissues to the wound surface, aiding in autolytic debridement.
- Low pH helps to lower the pH within the wound environment, which has been shown to have wound healing benefits.
- Is easy-to-use, non-toxic, natural and safe with the potential for extended wear times.

**Gel**
- 80% Active Leptospermum Honey and 20% Natural Gelling agents
- More viscous formulation with increased stability at the site of the wound
- Demonstrated positive clinical outcomes
- Optimal for superficial to full thickness wounds

**Paste**
- 100% Active Leptospermum Honey
- Demonstrated positive clinical outcomes
- Optimal for deep tunneled or undermined wounds

Pair MEDIHONEY® with our super absorbent cover dressing, XTRASORB®. It’s osmotic gradient pulls exudate to the back of the dressing and converts it into a gel, locking it away - even under compression!
